

KM 200

High flexibility with the KM 200 zero make-ready perfect binder

The KM 200 perfect binder can be used to produce hardcover books or softcover products with varying content and number of pages in quick succession, reacting precisely and automatically to thickness variations – zero make-ready. Apart from books, applications include multi-language versions of print products, price lists and collections of loose sheets, personalisation and localisation for individual advertising products.

With the KM 200 perfect binder, the distinction between make-ready time and production time disappears. All format changes and adjustments are carried out automatically 'on the fly'. This certainly does not mean producing with wider tolerances. On the contrary, all settings are adjusted with extreme precision from product to product with the highest quality.

The KM 200 perfect binder with a star feeder positioned to one side, in addition to an inline SF 842 sequential feeder, allows single block feed by hand at an ergonomic height for the operator. Highly dynamic axes adjust automatically to varying block thicknesses (book blocks up to 60 mm thickness). This continuous, automatic make-ready allows smooth, uninterrupted production. The downstream HD 143.D three-knife trimmer or HD-HD 143 three-knife-trimmer line also adjusts automatically and precisely to book block thicknesses that can change from product to product.

Features

- Zero make-ready – higher productivity
- 3D format change
- Reproducible quality products through highest production quality (first product is sellable)
- Robust parts tried and tested in high-speed binders
- State-of-the-art drive engineering and control technology
 - Continuous barcode control
 - Higher reliability of production
- Machinery networking – KOLBUS 3 • 60 and Workflow Design
- All glue types are applicable (hard- or softcover)
- Higher pull values for outstanding product quality
