

WF 100

The WF 100 web folder – high-performance component of the KOLBUS Bookjet® system

The WF 100 is unrivalled as the starting point for a choice of options for finishing – perfect binding, thread sewing, saddle stitching, Aziro and gluing – nothing is impossible. The flexible KOLBUS WF 100 can be integrated with any of a range of delivery units – a turning stacker, a counting stacker, an indexing stacker with or without auxiliary binding or a bundle stacker. Another possibility is direct inline coupling to a KOLBUS finishing line.

Output speed can be up to 60,000 sections an hour. The WF 100 is fast enough to match many coming generations of digital print machines.

This special KOLBUS web folder for digital print products is capable of handling an unsurpassed range of paper grades, even very lightweight paper. Folding is in the running direction of the paper, ideal for bookbinding. The web folder's folding pattern is perfect for digital binding. The folded signatures from the WF web folder are better than any alternative for the numerical modeling which is the key to efficiently pre-adjusting the downstream machines.

Features

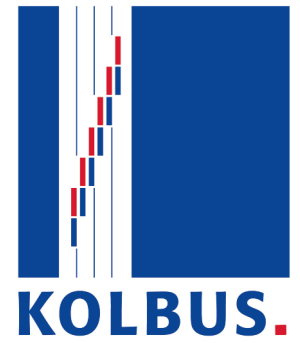

- Suitable for a large spectrum of production
 - Perfect bound, sewn & saddle-stitched products
 - Thin bible paper to heavy coated papers 28 to 130 g/m²
 - No limitation on the number of pages per product
- Extremely high product quality
 - Elimination of web curl with targeted ribbon flopping
 - Perfect regulation of face and back printing
